Ready for the future!

As a company committed to enterprise mobility, S-Blox recognized the tremendous number of electronic files, emails, web pages, video files, and other forms of multi-media exchanged as part of any team's business process. These different files and formats represent 80% of total information shared by teams, open scattered in various silos, and thus challenging to unify and manage. Thus, s-blox App was launched, a product which unifies teams with group collaboration and integrates disparate applications into the same centralized platform for the most efficient information management. Our Collaboration App "s-blox" is a co-development effort between us and our Silicon Valley technology partner Moxtra, co-founded by the visionary subrah iyar, the same co-founder of Webex. Thanks to the S-Blox UC solution, organizations gets immediate access to people, data and applications anytime, anywhere, on any device. A single unified platform that combines different features: group chats, audio and video conferences, file sharing, file

annotation, task management and more: all in single, integrated product accessible from any device, anywhere, and on any platform. Customers from a variety of backgrounds can begin to leverage these one-stop, team collaboration capabilities, as they greatly enhance business process.

Tailored for Police agencies

It's S-Blox's mission to help law enforcement agencies optimize its processes by integrating communication tools in an innovative and cost-effective way. That is why we support all current and future interactions - internal or external - anywhere, anytime and anyhow. Instead of having to deal with technical complexity, S-Blox allows operations to run more

efficiently and smoothly by being a partner for all connectivity and communication needs. We offer law enforcement agencies one single service desk for all their fixed and mobile communication which helps them move away from the current hard-to-manage communication environment involving different contracts, SLAs, etc. S-Blox private cloud UC answers all communication needs and makes current environments and dispersed networks a small and well-connected place!

S-Blox offers a range of collaboration solutions to ensure that everyone in your organization are accessible everywhere and have access to applications and data always. Our Private Cloud UC is the perfect solution if you are looking for a secure, flexible and collaborative service.

Benefits

- **Anytime Anywhere reachability** hence the Mobile 1st approach.
- **One Click Away communications** accessibility to individuals, WhatsApp style.
- **Gain flexibility and scalability.** Our UC solution is a modular, scalable solution which provides a quick and flexible response to your evolving needs.
- **Tailored to law agencies' problems** hence ability to customize user experience with vertical requirements.
- **Contextualization of communications,** by presenting all information possible about the call in a persistent chat rooms holding all past data and information about the call history thus saving time.
- **Simplicity** of Communications, easy to implement, Self-explanatory and with minimal support needed.
- **Make your collaboration tools easily available to your employees.** S-Blox puts together different functionalities, allowing all employees to communicate and collaborate as efficiently as possible. Give your users the ability to Meet, share content, add rich graphics and vocal annotations and hold conversations, etc.
- **Secure.** Authentication, single sign-on, data in rest & data in motion SSL/TLS & AES encryption, and reliability & redundancy.

- **Network adaptability.** S-blox adapts to variable network performance by optimizing the network's bandwidth usage, reduce network congestion and improve performance.

The challenge

How do police agencies effectively manage the movement and transfer of police information? This is a question that all police departments face in the digital age. Police departments need to ensure that each and every mobile terminal is safely managed. Not only is the focus on effective integration of information and analytics, but also on maintaining a secure channel for data in transit and protection of data.

The Solution

s-blox provides mobile information management solutions suitable for numerous mobile police forces. The inherent nature of police work produces copious information logs, forensic files, video captures, live recordings, etc. It's often difficult to centralize this unstructured information (in numerous different file formats) onto a single, integrated platform. However, s-blox's collaborative solutions enable these various channels to be integrated into a single, secured location.

Files any format can be uploaded into s-blox, which supports live file viewing directly within the platform, effectively achieving unified management of all files and channels within the system natively.

In addition to file management capabilities, s-blox's rich annotation suite further enhances remote communication efficiencies for police officers, especially in the field. For example, while analyzing forensic information, police officers can use sophisticated annotation tools and voice tags to explain the key details of a given situation precisely, virtually instantly. s-blox's video conferencing capabilities allow police officers in need to immediately escalate to a group meeting for help, where officers receive immediate understanding and response, regardless of the situation. Video and communicative recordings are saved in persistence and encrypted with military-grade protocols in any location of choice by the police agency, where they can be cross-referenced with other integrated data sources, all while leveraging best-in-class encryption methodologies.

Power Messenger

The capabilities include persistent 1-to-1 and multi-party chats, file sharing, rich annotation including voice tags, ad-hoc video creation for offline collaboration (known as "clips") and also rich file management capabilities.

To-Do, task management for teams

Delegating and keeping track of responsibilities is easier than ever with our intuitive task management, a seamless part of our power messaging experience. Assign to-dos and deadlines to groups or individual members and attach relevant files, all within the context of a team conversation.

Real Time Meetings

s-blox messenger users has the ability to create multi-party, real-time, voice and video conferences. File sharing, screen sharing, changing presenters and conference hosts are among the other capabilities available to s-blox users.

Pages

Over time the chat area might get quite lengthy and even though every item is time stamped and there is a global search I may not remember even the name of the file I am looking for 6 months or a year from now. With pages' tab I can view all of the content I ever uploaded in chronological order striped of the communications. I can select particular files and create folders for them.

Features

Different Features Per Profile	Enterprise
Power Messenger	✓
To-Do & Task Management	✓
Pages /Draw & Clip	✓
Search unlimited messages	✓
Meet (VoIP, Video, screen sharing & whiteboarding) - 100 participants	✓
300 MB file size upload	✓
24x7 support & 4 hrs response time	✓
Advanced Usage Statistics	✓
Advanced User Management	✓
Admin control over security policies	✓
SAML Single Sign-On	✓
Billing	✓
LDAP & MS Active Directory	✓
Enterprise Data Retention	✓
Org-wide reporting, metrics & analysis	✓
Controls & Compliance Policies	✓
